

M-200 Series

High flow, Adjustable flow switch with right-angle flow

Features

- Field adjustable - Infinite flow range
- High Repeatability
- Extremely sensitive
- Minimum pressure drop
- Position Insensitive

Description

The M-200 Series flow switches are engineered and field tested for sensing increasing and decreasing flow rates of gases or liquids. Pressure variation effects are minimal. This series features such versatility, economy, and accuracy that they can be used in virtually any application requiring fool-proof inexpensive flow detection.

Operation

The flow switch is activated by flow forcing a piston kept in place by a spring to travel past a reed switch. This provides a positive signal after a certain amount of travel. Set point adjustment is controlled by adjusting the positioning of the reed switch.

Illustrated is the M-200-B Model
with 1/2" ports.

Applications

- Cleaning Tools in the semiconductor industry
- Cooling systems
- Water treatment systems
- Process flows

Measurement Specifications

Calibration Range *	3/8", 1/2", SAE8: Air : 1 - 50 scfm Water : 0.03 - 5 gpm 3/4": Air : 2 - 100 scfm Water : 0.2 - 10 gpm * Maximum flows through switch are higher. For higher flow settings, contact factory.
Set Point Accuracy	±10% maximum
Repeatability	± 5% maximum
Hysteresis	15% - 30%
Material Versions *	<ul style="list-style-type: none"> • Acrylic • Alumunium • Brass • 316 Stainless Steel • PTFE * Other materials available on request.
Port Sizes	<ul style="list-style-type: none"> • 3/8" FNPT • 3/4" FNPT • 1/2" FNPT • SAE8

Custom Versions Available

Malema welcomes the opportunity to apply its flow sensor experience to work for its customers. Please contact the factory for any special requirements; such as ports, extreme temperature and pressure capabilities, etc.

Design Considerations/Construction

The M-100 Series comprises a Body, Piston, Endplugs, O-ring seals, and adjustment mechanism. Selecting a Flow Switch begins with selecting the body; this series is available in a number of materials. Adjustability is achieved by means of an adjustment screw controlling a bypass. Construction of the piston is important from a design perspective. We manufacture three (it is critical to select the correct piston for your application): 316 Stainless Steel, Teflon Encapsulated, and Special All-Metal piston.

(1) The standard piston is a 316 Stainless Steel piston with epoxy to hold the magnet in place. This piston is recommended for non-aggressive fluids and inert gases. Stainless Steel retaining rings are typically used with this piston type.

(2) The second piston that is available is a PTFE Encapsulated one. This piston is a magnet that has Teflon molded around it and then machined to the appropriate configuration. These pistons are primarily used in Teflon flow switches and also in other flow switch bodies (typically 316SS and Acrylic bodies) where customers prefer a piston that does not have epoxy in the fluid path; as well as a piston that is impervious to aggressive fluids and gases. This piston is highly recommended for medical applications. Hysteresis on these pistons does tend to be slightly higher (10 to 15%) than metal pistons due to frictional effects, weight, and surface adhesion considerations. Prior to selecting this piston, fluid temperatures and fluid compatibility with Teflon must be taken into account because certain aggressive chemicals at specific temperatures tend to swell PTFE causing the piston to change shape resulting in failure of the product. Stainless or PTFE-coated retaining rings can be used with this piston, along with a stainless spring (also coated).

(3) The third piston that is available is a Special All-Metal piston with no epoxy (only available in 316SS). This piston is fabricated in a proprietary process with only one weld seam (leak tested) which presents an all 316SS surface to the fluid path. This piston is recommended for those applications where the piston could experience a lot of cycling wear. This piston has been tested to 250,000 cycles at 125 psi. Stainless Steel retaining rings are recommended for this piston type.

Factory Preset Information

The M-200 is an adjustable flow switch. The flow set point can be set at the factory, upon request. Proper calibration of the set point requires the following information. When purchasing a flow switch that needs to be factory preset, use the "Set Point Calibration" form on page i-vi or provide this information on the purchase order.

- Calibration set point,
- Increasing or decreasing flow,
- Fluid type (i.e. liquid or gas),
- Density or specific gravity,
- Viscosity,
- System pressure and temperature,
- Flow direction (i.e. upward or downward), and
- Mounting orientation (i.e. horizontal or vertical).

Ordering Information

Standard Part Numbering						
M	-	Model	-	Material	Port	Switch
M	-	200	-	S	1	1
		200		A - Aluminum	3 - 3/8"	1 - SPST N.O.
				B - Brass	4 - 1/2"	3 - SPDT
				P - Acrylic	6-3/4"	
				S - 316 Stainless		
				T - PTFE		

* The M-200 with 3/4" ports is ONLY available in the Brass, PTFE or 316 SS body material.

The M-200 in Brass or 316 Stainless Steel is also available with SAE 8 ports.
